

AAKASH ACHARJEE

Software Engineer · Java · Spring Boot · Microservices · Distributed Systems · Kubernetes

Ph: +91-7001142623 ✉ aakashacharjee0@gmail.com linkedin.com/in/aakash-acharjee github.com/aakash-acharjee
Bengaluru, India

Professional Summary

Backend Software Engineer with experience building and maintaining microservices-based systems and API gateway infrastructure in enterprise environments. Proficient in Java, Spring Boot, and distributed systems, with hands-on expertise in API security (JWT, OAuth2), Kubernetes deployments, and production issue resolution. Track record of improving API reliability, reducing incident response time, and enabling stable release cycles across cross-functional teams.

Experience

Capgemini

Software Engineer

Bengaluru, India

June 2024 – Present

- Managed API gateway platforms (Kong, Axway) routing traffic across 10+ microservices, handling high-volume internal API calls from 5+ downstream engineering teams.
- Configured gateway routing rules and payload validation, cutting failed API requests by 15–20% and improving overall platform reliability.
- Designed scalable gateway configurations to accommodate growing traffic demands, reducing latency bottlenecks across the microservices architecture.
- Implemented **JWT and OAuth2** authentication flows, hardening API security and eliminating unauthorized access incidents across critical endpoints.
- Diagnosed and resolved production incidents in distributed systems, reducing mean time to resolution (MTTR) by ~20% and minimizing business disruption.
- Consolidated recurring integration failures across backend systems into permanent fixes, achieving measurable reduction in repeat incidents.
- Deployed and maintained containerized workloads using **Kubernetes and Docker**, ensuring zero-downtime rollouts and consistent cross-environment behaviour.
- Streamlined **CI/CD pipelines in Azure DevOps**, cutting deployment failures and accelerating release cadence for backend platforms consumed by internal teams.
- Partnered with cross-functional squads on system stability initiatives, contributing to smoother release cycles and a measurable drop in post-deployment defects.

Projects

Hotel Management System — Full-Stack Booking Platform

Java, Spring Boot, React, MySQL

- Built a full-stack hotel booking platform end-to-end in **Java (Spring Boot)**, covering room inventory management, booking workflows, and customer data handling.
- Designed and exposed RESTful APIs integrated with a **MySQL** relational database, supporting core business operations for the application.
- Optimized SQL queries and database schema, improving data retrieval performance by ~15% and reducing page load times for booking views.
- Developed frontend booking interfaces in **JavaScript (React)**, delivering an end-to-end user experience from search to confirmation.
- Wrote **JUnit** unit and integration tests, increasing code coverage and reducing regression defects in critical booking and payment workflows.

Technical Skills

Languages:	Java, SQL, JavaScript
Backend Development:	Spring Boot, REST APIs, Microservices Architecture
Cloud & DevOps:	Kubernetes, Docker, Azure DevOps, CI/CD
API & Integration:	Kong, Axway, API Gateway, OAuth2, JWT
Databases:	MySQL, Relational Database Design, Query Optimization

Education

Master of Computer Applications (Information Technology)

Amity University Kolkata

Sept 2021 – Jun 2023

CGPA: 7.92

Bachelor of Computer Application (Information Technology)

University of North Bengal

Jul 2018 – Aug 2021

CGPA: 8.51

Certifications

Career Essentials in Generative AI (Microsoft + LinkedIn Learning)
