Professional Summary

Senior Software Engineer with 2+ years of experience designing and operating Java/Spring Boot microservices on enterprise API platforms. Led an Axway-to-Kong API gateway modernization, strengthened authentication with OAuth2/JWT, and drove CI/CD and production reliability improvements on Azure DevOps and Kubernetes. Focused on building secure, scalable backend systems and collaborating across teams to improve platform reliability.

Experience

Capgemini

Bengaluru, India

Senior Software Engineer

Jun 2026 – Present

- Drive backend development and API gateway modernization initiatives for enterprise applications, designing secure and scalable REST APIs and microservices in Java and Spring Boot.
- Improve production stability through incident resolution, platform optimization, and CI/CD pipeline enhancements on Azure DevOps.
- Collaborate with cross-functional engineering teams to deliver backend solutions and raise engineering best practices across the platform.
- Contribute to architectural decisions for backend services, supporting reliability and scalability as the platform grows.

Software Engineer

Jun 2024 – Jun 2026

- Led API gateway modernization by migrating services from Axway to Kong, configuring routing policies, header transformations, and authentication for 10+ microservices.
- Implemented JWT and OAuth2 authentication mechanisms, strengthening API security and eliminating unauthorized access incidents across critical endpoints.
- Configured gateway routing policies and request validation, reducing failed API requests by 15–20% and improving platform reliability across 5+ engineering teams.
- Diagnosed and resolved production issues in distributed systems through root cause analysis, reducing MTTR by approximately 20% and fixing recurring integration failures at the source.
- Deployed and maintained containerized workloads using Docker and Kubernetes, ensuring reliable releases across development and production environments.
- Streamlined Azure DevOps CI/CD pipelines in collaboration with developers, QA, and platform teams, reducing deployment failures and post-deployment defects.

Projects

Hotel Management System

Java, Spring Boot, React, MySQL

- Designed and developed RESTful APIs using Spring Boot integrated with MySQL, supporting room inventory, booking workflows, and customer management.
- Optimized SQL queries and database schema design, improving data retrieval performance by approximately 15%.
- Implemented JUnit unit and integration tests to improve code quality and reduce regressions in critical application flows.

Technical Skills

Languages: Java, SQL, JavaScript

Backend & Frameworks: Spring Boot, REST APIs, Microservices, Distributed Systems

API & Security: Kong, Axway, API Gateway, OAuth2, JWT

Cloud & DevOps: Kubernetes, Docker, Azure DevOps, CI/CD

Databases: MySQL, Relational Database Design, Query Optimization

Tools & Practices: Git, Linux, Postman, JUnit, Unit/Integration Testing, Agile Development

Education

Master of Computer Applications (Information Technology)

Sept 2021 – Jun 2023

Amity University Kolkata

CGPA: 7.92

Bachelor of Computer Application (Information Technology)

Jul 2018 – Aug 2021

University of North Bengal

CGPA: 8.51

Certifications

Career Essentials in Generative AI – Microsoft & LinkedIn Learning
